

Experiment-1

Prelab Programs:

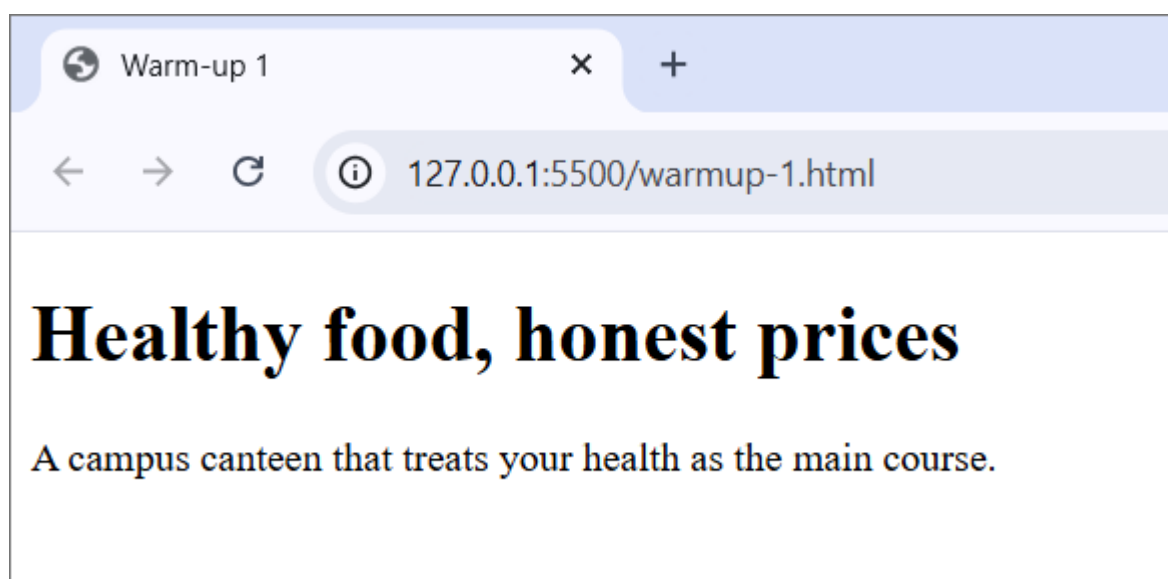

1. In a scratch file called warmup-1.html, write a complete page whose visible content is exactly one `<h1>` that says *Healthy food, honest prices* and one paragraph under it. Full skeleton — doctype to closing html — nothing skipped.

Source Code:

warmup-1.html

```
<> warmup-1.html X
<> warmup-1.html > html
1  <!DOCTYPE html>
2  <html lang="en">
3      <head>
4          <meta charset="UTF-8">
5          <title>Warm-up 1</title>
6      </head>
7      <body>
8          <h1>Healthy food, honest prices</h1>
9          <p>A campus canteen that treats your health as the main course.</p>
10     </body>
11 </html>
```

Output:

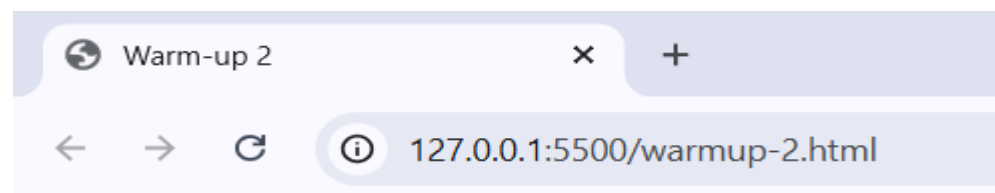

2. In warmup-2.html (full skeleton again — no shortcuts), the body holds one `<h2>` saying *Today's specials* and an unordered list of any three dishes you remember from Class 4's menu.

Source Code:

warmup-2.html

```
<> warmup-2.html X
<> warmup-2.html > html
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <title>Warm-up 2</title>
6  </head>
7  <body>
8      <h2>Today's specials</h2>
9      <ul>
10         <li>Ragi Idli Bowl</li>
11         <li>Pesarattu with Sprouts</li>
12         <li>Millet Protein Shake</li>
13     </ul>
14 </body>
15 </html>
```

Output:

Today's specials

- Ragi Idli Bowl
- Pesarattu with Sprouts
- Millet Protein Shake

3. In warmup-3.html, show a photo called ragi-idli-bowl.jpg that sits *in the same folder as the file*, with alt text a blind classmate would thank you for. (No such photo on your disk? Perfect — you'll see exactly what a browser does when an image is missing, and why alt matters.)

Source Code:

warmup-3.html

```
warmup-3.html X
warmup-3.html > html
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4    <meta charset="UTF-8">
5    <title>Warm-up 3</title>
6  </head>
7  <body>
8    <h2>Ragi Idli Bowl</h2>
9    
10 </body>
11 </html>
```

Output:

Ragi Idli Bowl

4. In one folder, create one.html and two.html. Page one shows a heading and a link reading *Go to page two*. Page two shows any heading, so you can tell you arrived. Save both, open one.html, click the link.

Source Code:

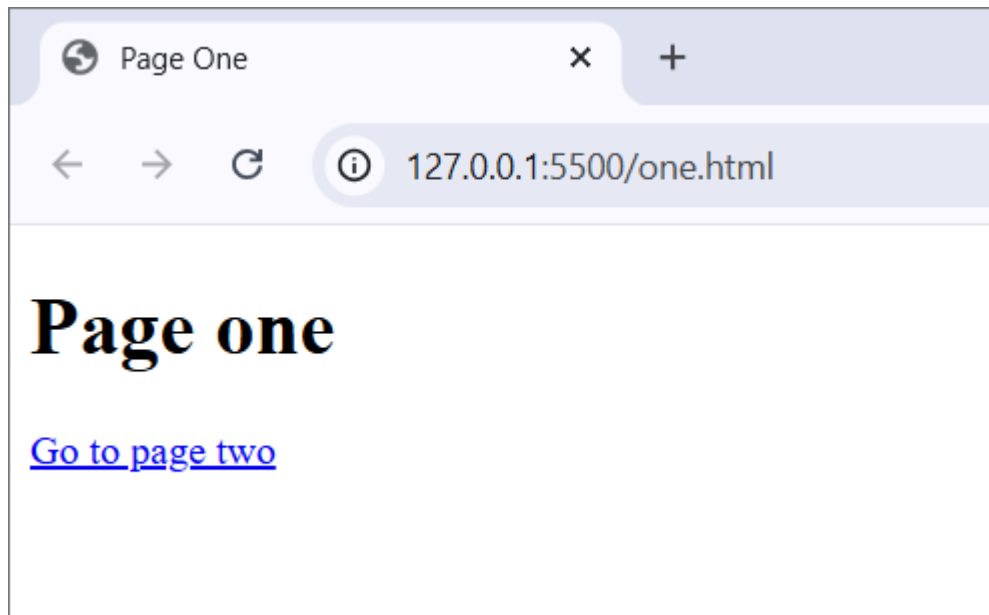

one.html

```
<> one.html X
<> one.html > html
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4  |   <meta charset="UTF-8">
5  |   <title>Page One</title>
6  </head>
7  <body>
8  |   <h1>Page one</h1>
9  |   <p><a href="two.html">Go to page two</a></p>
10 </body>
11 </html>
```

two.html

```
<> two.html X
<> two.html > html
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4  |   <meta charset="UTF-8">
5  |   <title>Page Two</title>
6  </head>
7  <body>
8  |   <h1>You made it.</h1>
9  </body>
10 </html>
```

Output:

Lab Programs:

Problem: 1 Poshtik Campus needs its front door: the page a visitor lands on first, carrying the brand and the way onward.

Requirements:

1. File name index.html, at the top level of poshtik-campus/.
2. Browser tab must read Poshtik Campus — Home.
3. One main heading with the canteen's name — exactly Poshtik Campus.
4. One welcome paragraph — type exactly:
Healthy Telangana & Andhra staples at student prices — millets, sprouts and protein bowls, made fresh on campus.
5. A navigation list reaching menu.html and about.html — yes, files that don't exist yet; write the nav as if they do, because in ten minutes they will.

menu.html.

1. Tab reads Poshtik Campus — Menu.
2. Main heading Our Menu.
3. One short intro paragraph.
4. An unordered list of all ten dishes, exact names, exact order from Part 6 — English only, plain text (they become fragment-linked sections in a later lab).
5. The same nav list as index — but think before you paste: what should the Menu entry become on the menu page itself?

about.html.

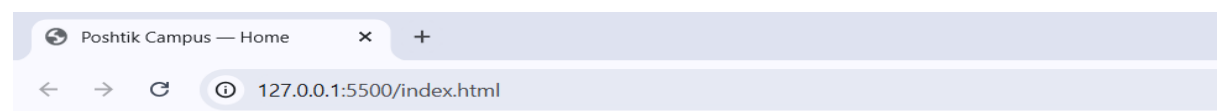

1. Tab reads Poshtik Campus — About.
2. Main heading About us.
3. Two short paragraphs — type exactly: “We believe campus food can be honest food: millets, sprouts and real vegetables, cooked the way home cooks.” and “Find us beside the library block, open 8am–8pm.” — so your render matches the solution sheet's preview exactly.
4. The nav, adapted the same way.

Source Code:

index.html

```
index.html X
index.html > html > head > meta
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <title>Poshtik Campus - Home</title>
6 </head>
7 <body>
8   <h1>Poshtik Campus</h1>
9   <p>Healthy Telangana & Andhra staples at student prices - millets, sprouts and protein bowls, made fresh on campus.</p>
10  <ul>
11    <li><a href="menu.html">Menu</a></li>
12    <li><a href="about.html">About</a></li>
13  </ul>
14 </body>
15 </html>
```

Output:

Poshtik Campus

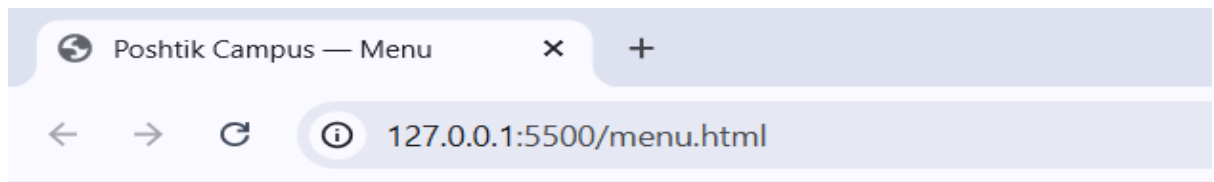

Healthy Telangana & Andhra staples at student prices — millets, sprouts and protein bowls, made fresh on campus.
